

Heuristic Evaluation

- Karan Panjabi
- Lamy Bhasin
- Tanay Gangey
- Vinay Jagadeesh

Assumptions

- Some of the hardcoded features are taken care of the backend — such as the subject list, recommender system, etc.
- We, the company, vet users to make sure the user is who they say they are to mitigate safety concerns.
- College gives us permission to have a competitor to peer-learning initiatives like PESU I/O

Constraints and Dependencies

- Currently only works on Android devices, no support for iOS or web.
- Time slots that the tutor chooses are only valid for that day, he would have to set time slots everyday
- Works on Android version ≥ 9.0 (Android Pie)

Weaknesses

- A user cannot be a tutor and a tutee with the same account currently, will need to make two accounts.
- May be a safety concern (if the users are not vetted).
- Hard to scale, time slots may be inefficient as the number of users increase.

Thank you
